

# Get started with M3 Workflows!

Meridion works with visualizing & simplifying processes to streamline your work processes. Infor M3's workflow is an excellent example of how new features in M3 support this ambition.

Infor workflow means that you create a process flow where different tasks are forwarded between people in the organization. Processes that go through different departments in the company can therefore be streamlined and more effective.

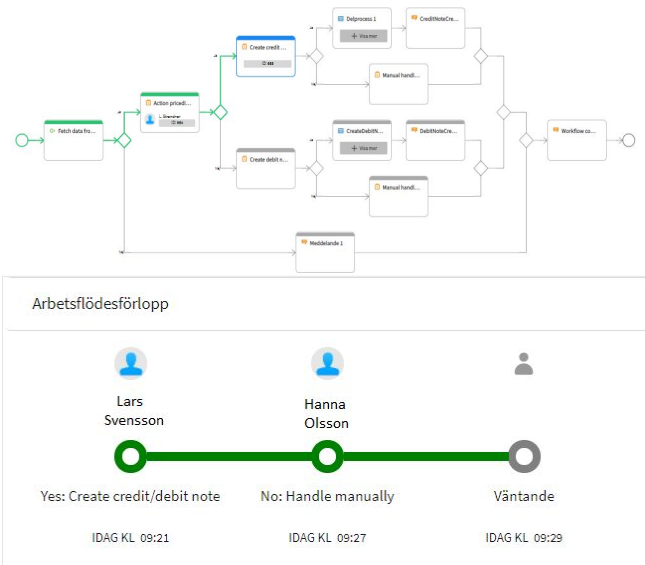

## Functionality

The workflow is configured in the ION desk and creates a clear picture of the entire process and what different paths it can take.

The user gets the opportunity to see where in the process you are, who has done what and when this has happened.

By using APIs from M3, the company's processes can be streamlined. In addition, information and tasks can automatically go to the right person within the company. Reminders can be added for tasks that are not completed on time and can also be escalated to other people in the organization. Automated and fast feedback leads to streamlining of processes and reduced processing

**Meridion has a global customer base with customers from multiple industries.**

## The Benefits

Process Overview

Traceability

Time efficiency

## The Offering

We validate your Infor OS environment regarding Workflows.

Joint set-up of a simple Workflow with support of Meridion's Templates. For example regarding item or customer creation.

After the set-up, the aim is that you've been provided with enough knowledge to carry out workflow creations on your own. This is carried out for 1-5 days.
