

Simplified Manual Voucher Upload in M3

Meridion has developed a tool that can help you upload manual vouchers to M3. It is quick, easy to use and provides with direct feedback to the user if any accounting information is invalid. Together with Infor OS workflow module, your company can have a fully digital approval flow that links the voucher to the supporting documentation.

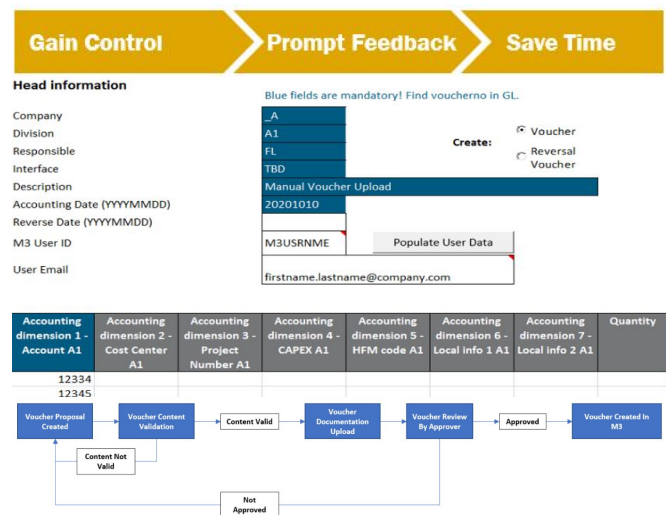

Functionality

Data validation take place before any information reaches M3, the user is informed about any issues either directly in the voucher template itself or via email.

By using your company's AD-information, the M3 user data associated with the person using the voucher template is retrieved automatically. This information is stored directly in the voucher.

The user can easily see which fields that are mandatory and will receive direct feedback if any information is missing or if the voucher is unbalanced. In addition, multiple voucher numbers can be created by assigning group ID.

Meridion has a global customer base with customers from multiple industries.

The Benefits

-  Quick feedback on validation of data
